Summary:

I'm a Senior Front End Engineer with over a decade of experience building high-performance, user-centric web applications. My expertise includes React, TypeScript, Next.js, and GraphQL, and I specialize in delivering scalable UI solutions for high-traffic environments, such as sports betting platforms. I thrive in fast-paced, collaborative settings and have led initiatives like monorepo optimizations and cross-functional UI design systems for large-scale applications.

Work Experience:

Penn Entertainment

Senior Front End Engineer, April 2022 - Present

- Spearheaded a monorepo initiative to optimize a shared UI/component library for retail, casino, and sportsbook apps, serving millions of users in a real-time, high-traffic sports betting environment.
- Collaborated with cross-functional teams (Product, Design, and Engineering) to deliver high-quality, pixel-perfect UI implementations while focusing on accessibility and UX.
- Developed and enforced best practices in React, TypeScript, GraphQL, and CI/CD pipelines, ensuring efficient and maintainable front-end architecture.
- Mentored and onboarded new hires, conducting 30/60/90-day check-ins and technical training sessions.
- Conducted interviews and hiring evaluations to expand engineering talent, with an emphasis on UI/UX-focused front-end developers.

7Summits, an IBM Company

Senior Front End Developer, October 2021 - April 2022

- Led mentorship programs to train new front-end developers and foster a collaborative environment in agile workflows focused on UI/UX design.
- Collaborated with tech leads to define user stories, technical specifications, and Agile workflows that prioritized usability and UI efficiency.
- Contributed to R&D on improving accessibility standards and front-end best practices.

Front End Developer, November 2019 - October 2021

- Built Aura and Lightning Web Components (LWC) for Salesforce Lightning Experience and Communities, prioritizing responsive design and seamless user interactions.
- Developed reusable Salesforce AppExchange accelerators designed for scalability and intuitive UI/UX experiences.
- Partnered with back-end teams to develop, test, and deploy Apex controllers/triggers, ensuring seamless integration between UI and data layers.
- Worked closely with designers to implement accessible, mobile-friendly interfaces that adhered to Salesforce Lightning Design System standards.

Cendyn

Lead Front End Developer, January 2019 - November 2019

- Led product feature development using Vue.js, .NET Core, and SQL, ensuring seamless UX/UI interactions and responsive design across devices.
- Established best practices for UI/UX implementation, emphasizing design systems, accessibility, and front-end performance.
- Standardized component usage to create a cohesive user experience across all product features.

Front-End Developer → Production Manager → Product Services Manager (2011 – 2019)

- Spearheaded Sales Suite Redesign, focusing on a user-first design approach, improving navigation, user flows, and visual hierarchy.
- Standardized tech stack and UI/UX principles to create a scalable and maintainable front-end architecture.

Define. Measure. Analyze. Implement. Control.

Brandon Franklin

Loxahatchee, Florida - 561.674.6225 - brandon.h.franklin@gmail.com

Key Projects:

Penn Entertainment Mono Repo

- Led the architecture and implementation of a monorepo utilizing pnpm and NX to manage multiple services and ensure consistent development practices across teams.
- Integrated design system by leveraging Figma CSS tokens to create a unified, scalable design language, allowing automatic export and consumption of tokens across all components.
- Developed composable React components packaged into reusable libraries, ensuring component-level isolation and easy integration across applications, improving maintainability and reducing redundant code.
- Collaborated with design teams to ensure the design system components matched the required visual specifications, improving UI consistency across all platforms.

Penn Entertainment Live Streaming

- Acted as Tech Lead for implementing a user-friendly UI for real-time sports streaming, optimizing the user experience for high-traffic sports betting platforms.
- Integrated real-time data dashboards for performance analysis in Datadog and BugSnag.

Cendyn Sales Suite Product Redesign

- Led a cross-functional team of designers, developers, and product managers to create a modernized, intuitive user interface.
- Influenced UI/UX decisions with a focus on visual hierarchy, user flows, and accessibility.
- Defined a design system and front-end best practices, improving product consistency and scalability.

Technical Skills:

Front End Development

- **Languages & Frameworks:** React, Next.js, TypeScript, GraphQL, Vue, Zustand, Jest, Tailwind, Storybook
- **UI/UX & Design Systems:** Accessibility (A11y), Responsive Web Design, Cross-Browser Compatibility, Pixel-Perfect Implementation
- **Tooling & Performance:** CI/CD (GitHub Workflows), Percy, Happo, Datadog, Bugsnag, Lighthouse Audits
- **Front-End Architecture:** Scalable Component Design, State Management, Monorepos

Design & UI Expertise

- **Design Principles:** Visual Hierarchy, Color Theory, Typography, Layout, Interaction Design
- **Collaboration:** Work with designers, product teams, and developers to create intuitive interfaces
- **Prototyping & Tools:** Adobe Creative Suite, Figma, Sketch

Professional Development:

Google Cloud Training (ongoing):

- Vertex AI (Prompt Design and Notebooks)
- BigQuery ML (Model Creation and Predictions, Data Analysis with Workbench and Colab Instances)
- Responsible AI, LLMs, Generative AI

Education:

Bachelor of Graphic Design – Digital Media Arts College (Lynn University)

- Focused on user-centered design, visual hierarchy, and accessibility, which I've applied throughout my career to create high-impact, user-friendly web applications.
